- **Computer programming** is the process of designing and building an executable computer program for accomplishing a specific computing task.
- **Programming** involves tasks such as analysis, generating algorithms, profiling algorithms' accuracy and resource consumption, and the implementation of algorithms in a chosen programming language (commonly referred to as coding).
- The **source code** of a program is written in one or more **programming languages**.
- The **purpose of programming** is to find a **sequence of instructions** that will automate the performance of a task for solving a given problem.
- The **process of programming** thus often requires expertise in several different subjects, including knowledge of the application domain, specialized algorithms, and formal logic.
